(57) Abstract: The present invention relates to an integrated method and system for preventing and solving problems relating to pests of any kind on a site, in a building, in a process, installation or in an area. The system involves complete digitalising and automation of all functions necessary in order to control the pests such as surveillance, registration, alarms, regulation and remedial actions as well as generating reports etc. the aim is to make the overall effort against the pests more effective by means of fully automating all processes to the furthest possible extent.
